

PL1500

The PL1500 is the Fuji-Tecom entry level locator; it would suit the person who would need to do basic locating of pipes or cables for avoidance purposes.

Description

The PL-1500 pipe and cable locator is a single frequency locator that comes in an 8 kHz Low or an 83 kHz High model. The PL-1500 is a very durable unit that is a work of art in its simplicity of use and sophistication of operation. There are no menus to learn; just three ways of applying a signal (conductive, clamp and inductive, which not all locators offer). So you're sure to locate all utilities. Plus, the PL-1500 is lightweight, compact and designed to withstand the everyday demands you place on it.
